

Mobile Device Product Sheet

The service

Teton managed mobile devices are fully managed by Teton and come pre-configured with the Teton app already installed. These managed devices are designed to give users an easy and seamless way to access and experience all the features of the Teton system without any confusing configuration needed.

Other applications used by your care facility won't be able to be downloaded on Teton managed mobile devices. For this reason, we recommend purchasing mobile devices through your standard internal process if you need additional functionality.
